# Double-Height Mesh Baskets for Pond Plants

This page is about a somewhat fiddly but useful way to combine two pond mesh baskets into one, thereby giving marginal plants the option to be planted in deeper water. I'm sure there are far easier ways than I've illustrated here but it did work. It's also the closest I'll ever get to underwater basket weaving.

I purchased two **28cm long x 28cm wide x 19cm deep** plastic planting baskets and with about twenty **200mm x 2.5mm cable ties**, I fixed them together as is shown below.
